

How to run analysis

1. Find the location path of your project you want to analyze.
2. Put the location path into the main() method as an argument in Main.rsc

Example:

```
int main(loc projectLocation = |home:///Documents/UVA_SE/SE/series0/hsqldb-2.3.1|)
```

3. Create a rascal terminal
4. Import the main module: import Main;
5. Run it: main();
